# Passing - Body Mechanics

**SETUP**: Two cones 3 or 4 feet apart forming a gate. Two players and one ball on either side. Set up multiple gates so all players participate simultaneously.
**INSTRUCTIONS**: Variation 1: Players pass back and forth, each player must take two touches. Variation 2: Race - see which pair of players can complete 40 passes first (repeat). Variation 3: Players pass back and forth, each player has only one touch. Variation 4: Race - see which pair of players can complete 40 passes first (repeat).
**COACHING POINTS**: Make sure all players are using the right body mechanics/body shape. They must perform this correctly to develop good habits. This is the right body mechanics: 1. Plant the non kicking foot side by side with the ball (not behind it), with the toes pointing to the target player. 2. Point the non kicking foot and knee to the side, 90 degrees in relation to the non kicking foot. 3. Swing the kicking foot through the ball and up in the air, like a golf put. Do not fall forward and jab your kicking foot into the ground. Swing the leg in a straight line directly toward the target. 3. Contact the ball with the flat side of the heel, not the side of the big toe.

Coaches must make sure all players perform with the correct body mechanics.
